Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Gann et al. (U.S. Patent No. 5,726,771).

Regarding claim 1, Gann et al discloses a method of reading image information by using an image detector enabling recording of the image information by storing an electric charge obtained by detecting an electromagnetic wave representing the image information, the image information reading method comprising the step of carrying out main reading for reading the image information by obtaining an electric signal in accordance with an amount of electric charge stored in the image detector, the image information reading method further comprising the steps of: carrying out pre-reading prior to the main reading; analyzing the electric signal obtained by the pre-reading; determining a normalization processing characteristic used for carrying out normalization processing on the electric signal obtained by the main reading; and carrying out the normalization processing on the electric signal obtained by the main reading, based on the normalization processing characteristic that has been determined (fig. 3, col. 5, line 49 through col. 6, line 39).

Regarding claim 10, arguments analogous to those presented for claim 1 are applicable to claim 10.

Art Unit: 2622

Allowable Subject Matter

Claims 2-9 and 11-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
